

## GLOWING MOUTH GUARD

### ABSTRACT

5        A glowing mouth guard has a transparent main body, and a  
transparent glow element for insertion in the main body; the glow  
element has an outer part formed with several separate holding rooms,  
which contain respective easily-breakable sealed tubes as well as  
respective first chemicals therein; the sealed tubes contain respective  
10    second chemicals therein; one of both of the chemicals in each holding  
room of the glow element is a catalytic agent, and the other a luminous  
chemical, which can produce fluorescent glow through a chemical  
reaction with the help of the catalytic agent when it is mixed with the  
agent, such that the holding rooms of the glow element have respective  
15    ones of several different-colored fluorescent glows shining.
